

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

in the orchard of our farm in Jefferson County, Colorado, located a mile and a half south of the little town of Broomfield. I hurried to the spot whence the cries came and found that I was not mistaken in the notes with which I was familiar in my boyhood days in Illinois, for, there in a high cottonwood tree in the midst of the orchard were two Blue Jays. They were wild and restless and flew off at once in a southwesterly direction, passing near enough, however, for positive identification. The following day my son saw one in the same tree and it flew in the same direction.

Blue Jays have previously been observed around Wray, in the eastern part of our State but it is my impression that this is an extreme western record.—A. H. FELGER, *Denver, Colo.*

Note on the Bronzed Grackle in Maine.—Mention should be made, I think, of the increase in the numbers of the Bronzed Grackle (*Quiscalus quiscula æneus*) in and about Portland, Maine, since it was recorded,¹ many years ago, as "rare,—even in the migration uncommon." It is nowadays one of the common species of this part of southwestern Maine, and during the migration periods sometimes occurs in large flocks. On April 13, 1915, I saw at least six hundred birds together in the town of South Portland. The possibility suggests itself that more than one geographical race may be represented in such an increase. Recent specimens in evidence are lacking.—NATHAN CLIFFORD BROWN, *Portland, Maine.*

A Bird new to the North American Fauna.—The Bureau of Fisheries has transferred to the collection of the U. S. National Museum a fine adult male Pine Grosbeak taken on the tundra of St. George Island, Pribilofs, Alaska, Oct., 1915. This specimen proves to be *Pinicola enucleator kamtschathensis* (*Corythus enucleator kamtschathensis* (sic) Dybowski, Bull. Soc. Zool. France, 8, 1883, 367; founded on Taczanowski, t. c., 7, 1882, 394), and measures as follows: wing, 112; tail, 92; culmen, 14.5; depth of bill at base, 11.5; width of bill at base, 9.5; tarsus, 21.5; middle toe, 15 mm. These measurements are almost exactly duplicated by a specimen taken by Mr. A. H. Clark at Petropaulski, Kamchatka, June 17, 1906 (Proc. U. S. Nat. Museum, 38, 1910, 64).—J. H. RILEY, *Washington, D. C.*

The Evening Grosbeak (*Hesperiphona vespertina vespertina*) in Southern New Jersey and Pennsylvania.—On January 29, 1917, at about noon in the midst of a cold rain I was walking along a road which passed by a little clearing near a saw-mill at New Lisbon, New Jersey. I heard a series of loud chirpings, something like the chirping of English Sparrows only more resonant. On looking up I saw a small yellow locust tree by the side of the road almost filled by a flock of Evening Grosbeaks. The birds kept motionless for some time and I had an opportunity to count them three times in succession and found that the flock consisted of seventy-four.
